

Different eyes. Suggested newsletter text

'When we see the Earth from space, we see ourselves as a whole. We see the unity, and not the divisions. It is such a simple image with a compelling message: one planet, one human race.'

Stephen Hawking, Theoretical Physicist.
'Brief Answers to the Big Questions'.

Astronauts looking back at our Earth from space have spoken about how it completely changes their view of our planet – blown away by its beauty, and its fragility. Taking a step outside of our everyday lives helps us to see things differently.

This holiday Young Climate Warriors are encouraged to explore our planet with 'different eyes'. To explore a tiny patch of nature close to home that they have walked past a thousand times before, and see it with different eyes. According to the pioneer astronaut, John Glenn, the most powerful quality in an astronaut is curiosity. Where will their curiosity take them?

Exploring with 'different eyes'

Where will your curiosity take you? Can you explore our planet with 'different eyes' – like an astronaut, a bird, or an ant?

This week's challenge
31st March

Raindrops dangling from moss and lichen on a wall. The crumbling bark and outstretched roots of a tree.

Explore a TINY patch of nature. Feel different textures. Close your eyes – what does it smell like? What can you hear?

YOUNG CLIMATE WARRIORS
