

## Suggested newsletter text – Taking water for granted

'Climate change is forcing girls out of school. In 2021 climate-related events will prevent at least 4 million girls from completing their education.'

Malala Fund Report – A greener, fairer future. 2021

Young Climate Warriors are asked ... do we sometimes take water for granted? Save water this week – swap baths for showers, set a timer for showers, turn the tap off whilst brushing teeth or stop a dripping tap ... what will they choose to do? It's also an opportunity to learn about water issues experienced by other children around the world, which are being greatly exacerbated by climate change. We include a WaterAid video ['What has climate change got to do with Water'](#).

### Do we take water for granted?

What's the weather like today? Climate is a description of 'average weather conditions'.

Climate change is causing more extreme and unpredictable weather like 'too much water - flooding' or 'too little water - droughts'.

Do we sometimes take 'water' for granted? How much water do you use in a week? Can you switch off your tap whilst brushing your teeth? Set a 5-minute shower limit?

[Wateraid.org](http://Wateraid.org) works to provide clean drinking water to communities around the world - check out their website!

This week's challenge:  
28th April
